

## VEGAFOLD

### Combination folder / crossfolder.

The VEGAFOLD in combination with the VEGASTACK is a solution for folding and stacking all kind of flatwork with a high production and high folding quality.

In single-lane sheets can be fully automatically folded up to two lateral folds combined with three cross folds. Small pieces can be folded up to two lateral folds in four-lanes.

The lateral folds are accomplished by air blasts between rollers.

The first cross fold is made by knife between two driven rollers, the second by knife combined with belt reverse and the third cross fold by knife.

The cross fold section is build according to a compact modular system so that the stacker can be placed either on the right or to the left side and can be reversed on side.

The VEGAFOLD is a completely freestanding machine. Very compact, floor-saving and easy to ship and transport, that will operate behind every make of ironer.

The folder has a PLC-system control with a control panel to program up to 100 programs, to test inputs and outputs, to control overlaps, stacking height, fault tracing, production counters, all in single- and multi-lane.
